Course duration

5 days

Course Benefits

- Understand the core principles of Spring, and of Dependency Injection (DI) / Inversion of Control
- Use the Spring Core module and DI to configure and wire application objects (beans) together
- Know the different types of metadata (XML, annotations/@Component, and Java Configuration/@Configuration), and how and when to use them
- Understand and use the complete capabilities of the Core module, such as lifecycle events, bean scopes, and the Spring API
- Use Spring Boot to simplify dependency management and configuration
- Work with the ORM (Object-Relational Mapping) module to integrate Spring with technologies such as Hibernate or JPA.
- Use Spring Data to automatically generate JPA-based repository classes
- Understand and use Spring's transaction support, including the easy-to-use Java annotation support, as well as the tx/aop XML configuration elements
- Integrate Spring with Java EE Web applications
- Build Web applications with Spring MVC, including configuration using Java config and Servlet 3 capabilities
- Understand and use the core capabilities of Spring's Reactive programming support
- Understand REST, and use Spring MVC to build RESTful services
- Use Ajax-based front ends with Spring MVC / Spring REST

Available Delivery Methods

Public Class

Public expert-led online training from the convenience of your home, office or anywhere with an internet connection. Guaranteed to run .

Private Class

Private classes are delivered for groups at your offices or a location of your choice.

Course Outline

1. Introduction to Spring

- 1. Overview of Spring Technology
 - 1. Motivation for Spring, Spring Architecture
 - 2. The Spring Framework
- 2. Spring Introduction
 - 1. Declaring and Managing Beans
 - 2. ApplicationContexts The Spring Container
 - 3. XML and @Component/@Named Config
- 3. Dependencies and Dependency Injection (DI)
 - 1. Examining Dependencies
 - 2. Dependency Inversion / Dependency Injection (DI)
 - 3. DI in Spring XML and @Autowired
- 2. Configuration in Depth
 - 1. Java Based Configuration (@Configuration)
 - 1. Overview, @Configuration, @Bean
 - 2. Dependency Injection
 - 3. Resolving Dependencies
 - 2. Integrating Configuration Types
 - 1. XML and @Component Pros/Cons
 - 2. @Configuration Pros/Cons
 - 3. Choosing a Configuration Style
 - 4. Integrating with @Import and <import>
 - 3. Bean Scope and Lifecycle
 - 1. Singleton, Prototype, and Other Scopes
 - 2. Configuring Scope
 - 3. Bean Lifecycle / Callbacks
 - 4. Externalizing Properties
 - 1. Properties Files
 - 2. @PropertySource, property-placeholder
 - 3. Using @Value
 - 4. SpEL
 - 5. Profiles
 - 1. Overview and Configuration
 - 2. Activating Profiles
- 3. Spring Boot Overview
 - 1. maven and Spring
 - 2. Spring Boot Structure
 - 3. Spring POMs with Boot Parents
 - 4. Spring Boot Starters
 - 5. Other Capabilities
- 4. Spring Testing
 - 1. Testing and JUnit Overview
 - 1. Writing Tests Test Classes, asserts, Naming Conventions
 - 2. Running Tests IDE, maven, ...
 - 3. Test Fixtures setup and teardown
 - 2. Spring TestContext Framework
 - 1. Overview
 - 2. Configuration

- 3. Running Tests
- 5. Spring and Spring Data with Hibernate/JPA
 - 1. Overview of Spring database support
 - 2. Configuring a DataSource
 - 3. Using Spring with Hibernate
 - 1. High Level Hibernate Overview
 - 2. SessionFactory configuration, LocalSessionFactoryBean
 - 3. Contextual Sessions and Spring Integration
 - 4. Using Spring with JPA
 - 1. Managing the EntityManager (EM)
 - 2. LocalContainerEntityManagerFactoryBean and Container-managed EMs
 - 3. JEE and JNDI Lookup of the EM
 - 4. Configuration and Vendor Adaptors
 - 5. Creating a JPA Repository/DAO Bean @PersistenceUnit, @PersistenceContext
 - 5. Spring Data Overview
 - 1. Overview and Architecture
 - 2. Configuring Spring Data
 - 3. Repositories and JPA Repositories
 - 4. Using CrudRepository
 - 6. Using Spring Data
 - 1. Naming Conventions for Querying
 - 2. Creating more Complex Queries
 - 3. Query Configuration
- 6. Spring Transaction (TX) Management
 - 1. Overview
 - 2. Declarative TX Management (REQUIRED, etc.)
 - 3. TX Scope and Propagation
 - 4. Pointcut-based Configuration of Transactions
- 7. Spring Web Integration and Intro to Spring MVC
 - 1. Java EE Web App Integration
 - 2. ContextLoaderListener and WebApplicationContext
 - 3. Web MVC Overview
 - 4. Spring MVC Basics
 - 1. Configuration and the DispatcherServlet
 - 2. @Controller, @RequestMapping (Handlers)
 - 3. @RequestParam and Parameter Binding
 - 4. View Resolvers
 - 5. Controller Details @RequestParam, @PathVariable
 - 6. Model Data and @ModelAttribute
- 8. Additional Spring MVC Capabilities
 - 1. @ModelAttribute and Reference Data
 - 2. Forms and Binding, Spring Form Tags
 - 3. Sessions and @SessionAttributes
 - 4. Validation / JSR-303
- 9. RESTful Services with Spring
 - 1. REST Overview and Principles

- 2. REST and Spring MVC
 - 1. Spring support for REST
 - 2. @RequestMapping/@PathVariable, @RequestBody, @ResponseBody
 - 3. URI Templates and @PathVariable
 - 4. Controllers with @RestController
- 3. Requests and Responses
- 4. Ajax Overview
- 10. Working with JSON and XML
 - 1. Generating JSON
 - 1. JSON Overview
 - 2. JSON Representations for Resources
 - 3. Message Converters
 - 2. Generating XML
 - 1. JAXB and Jackson Message Converters for XML
 - 2. JAXB / @XmlRootElement
 - 3. Content Negotiation
- 11. Java Clients for RESTful Services
 - 1. Client Requirements and Spring's RestTemplate
 - 2. getForObject() / getForEntity()
 - 3. Other RestTemplate Methods
 - 4. Accessing Headers / exchange()
- 12. Common REST Patterns
 - 1. GET: Read
 - 2. POST: Create
 - 3. PUT: Update
 - 4. DELETE: Delete
 - 5. Programming on server side, and client side (with RestTemplate)
- 13. Additional New Features in Spring 5
 - 1. Updates to Spring Core
 - 2. WebFlux / Reactive Web Framework

Class Materials

Each student will receive a comprehensive set of materials, including course notes and all the class examples.
